# AUTOMATE AND STREAMLINE YOUR PERMIT-TO-WORK PROCESS

When an organisation is managing high risk activities - such as construction projects, maintenance work, equipment installation and refurbishment - it is imperative that any work undertaken by a contractor is controlled, to reduce the risk of human injury, damage to property or assets and to ensure that your business operation isn't disrupted or security compromised. The permit-to-work process manages the compliance of those coming on site to perform their tasks. The work must be carried out by the right contractor, with the right skills, knowledge, experience and training.

ePermits is the UK's first and leading mobile and web permit-to-work solution. It digitally transforms an organisation's existing permit-to-work regime into an automated workflow-driven process that includes: competence checks, scenario management, communication, clash checks and documentation, raising alerts when issues need to be resolved for work to proceed.

This solution is part of the Alcumus platform with single sign-on and data integration of key data points. Our specialists will continually work with you to develop and mature your permit-to-work process to drive forward your safety and business efficiency goals. Access the software anywhere, any time and using any device by anyone involved in the permit-to-work request and approval process.

Eliminate paper-based systems which are error prone and provide visibility via a prescribed digital process

Cost savings in terms of insurance premiums and avoid unnecessary costs through legal fees, fines, business downtime, damage to reputation

Reduce risk of injury to people, damage to property, disruption of business

Quick to deploy, intuitive technology with support and guidance to tailor the system for your business

Gain visibility of contractor works and their work performance

Improve decision-making across the business through better visibility of information

Mitigate risk through full contractor control - who is doing what, when, where, why and how

Ensure compliance with latest government legislation, industry regulation and corporate governance

Alcumus has been recognised as a "Leader" in an independent review of global EHS software vendors by research and advisory firm Verdantix. Alcumus is one of only a few vendors to score strongly across the full solution spectrum laid out in the Verdantix research.
